Today, in the most integrating weeds management systems, extensively, use herbicides, therefore severe dependence to them, is the cause of appearance serious risk to environment, public health also raising agricultural production expenses (Burgos et, al 1999). Allelophaty Before is defined as each suitable or harmful effect, which it's generates as a result of biochemical Edit substances secretion by giver plant on the receiver one (Rice 1984). The Allelochemical substances at specific situations, exudes into environment, so that, they can be effective on the germination, root and stem growth, numbers of soil micro organisms and others plant reactions (Putnam 1988). The harmful effect of plant remains upon next planting will be created important problems to chaff cultivated, how, this way is performing in order to preservation of water and soil. Substances produced of chaff, are the cause of poisoning some plants (Bohrani 1994). Today, in the most integrating integrated weeds management systems, extensively herbicides are used extensively, therefore severe dependence to on them, is the eause of appearance poses a serious risk to the environment, causes public health concerns and raises also raising agricultural production expenses (Burgos et, al 1999). Allelophaty Allopathy is Edited defined as each suitable or a harmful effect, which it's generated as a result of the secretion of biochemical substances secretion by a givent plant on a the receiver plant one (Rice 1984). The Allelochemical substances Inst specific situations, conditions allochemical substances are exudeds into the environment, environment; so that, they can be effective on the germination, root and stem growth, numbers of soil micro organisms and others plant reactions (Putnam 1988). The active harmful mattereffect of plant remains residue exists in the chaff and has an effect upon next subsequent planting will . be created important problems to chaff cultivated, how, this way is performing in order to preservation of water and soil. Substances produced of from chaff, are the cause of poisoning in some plants (Bohrani 1994).

After Edit Today, in most integrated weed management systems, herbicides are used extensively therefore severe dependence on them, poses a serious risk to the environment, causes public health concerns and raises agricultural production expenses (Burgos et al. 1999). Allopathy is a harmful effect generated as a result of the secretion of biochemical substances by a given plant on a receiver plant (Rice 1984). In specific conditions allochemical substances are exuded into the environment; they can effect germination, root and stem growth, numbers of soil micro organisms and other reactions (Putnam 1988). The active harmful matter of plant residue exists in the chaff and has an effect on subsequent planting. Substances produced from chaff, are the cause of poisoning in some plants (Bohrani 1994).
